

Relationships Method

Directional: We record direction of exchanges and relationships. This means there is a source (the person speaking) and a target (the person listening). Character 1 is the source and Character 2 is the target. If the person listening responds, then it is a reciprocal exchange. The same thing goes for relationships. If the source sees the target, it is a one way relationship. If the target sees the source as well, it is a reciprocal relationship. Stewart has added a “is reciprocal box.” If the relationship is reciprocal, select true. If it is not reciprocal, select false.

Exchanges: All exchanges are relationships. If there is an exchange between two characters on a page, you do not need to record a relationship. All exchanges are reciprocal (one character speaks/ writes/ communicates and another receives that communication even if they don't respond) unless otherwise indicated by situations like the following:

- A letter is intercepted and doesn't reach its recipient
- A TV news anchor communicates the news, but the viewers cannot respond
- Eavesdropping is a one-way exchange between the person speaking and the person hearing

Relationships: Instead of MENTIONS, let's do RELATIONSHIPS:

Relationships are:

- Any declaration of a relationship
 - Mr and Mrs Dursley live at Privet drive declares that the two have a relationship. (Mutual relationship)
 - Harry Potter, Lily and James's son declares another relationship (Mutual relationship)
 - After establishing a relationship, you do not need to record it again unless the relationship is explicitly named:
 - Did Voldemort kill Harry, the Potter's son? (One way relationship between Voldemort and Harry; but also Declares a mutual relationship between Harry and his parents)
 - Did Voldemort kill Harry Potter? (One way relationship between Voldemort and Harry Potter; The relationship between Harry and his parents is implied but not explicitly named)
- Physical interaction between characters
 - Voldemort tried to kill Harry Potter (One way relationship)

- Mr Dursley pecked Mrs Dursley on the cheek (One way relationship)
- One character referring to another character
 - Professor McGonagall said Harry Potter survived. (One way relationship between McGonagall and HP)
- Embedded references refer to multiple relationships
 - Professor McGonagall said Hagrid said Harry Potter survived. (One way relationship between McGonagall and Hagrid, one way relationship between Hagrid and HP, one way relationship between McGonagall and Harry Potter)
- Perception and thought counts as a relationship
 - Mr Dursley saw the cat (One way relationship between Mr Dursley and McGonagall)
